

Fun Cards

Use the provided starter to create the interactive card described in this document. A short animated *.gif* file is provided as well - we recommend you view it before reading this document.

You will also need to use [Font Awesome](#) and [animate.css](#).

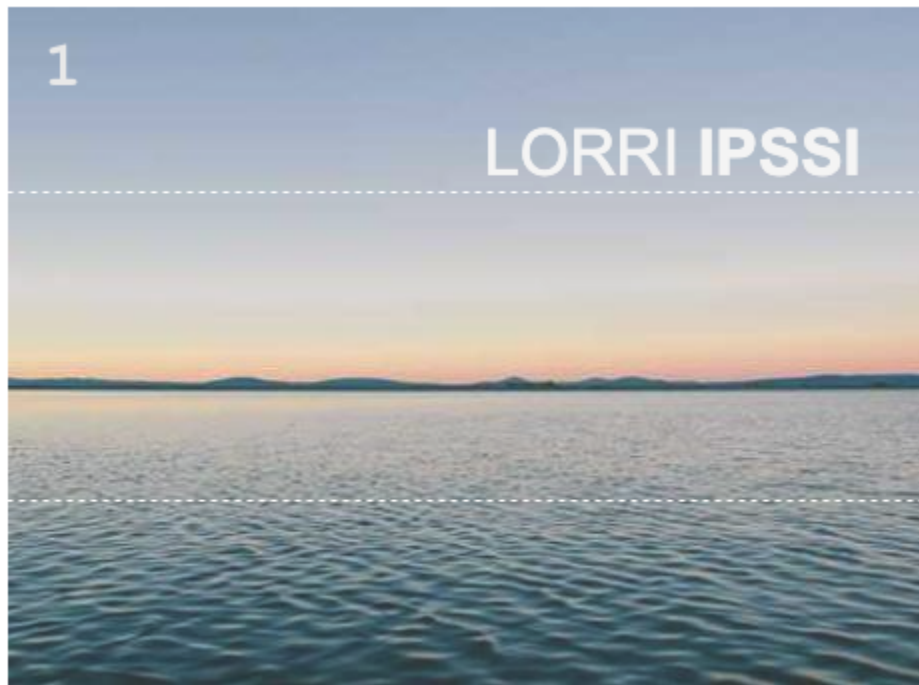

Image 1 shows the initial state of the card when it is not hovered over with the mouse. The dotted grid lines are provided for convenience and are not rendered in the actual card.

Image 2 shows a few changes which happen when the card is hovered over with the mouse

- The opacity of the image drops to reveal the gray background underneath it and make the text easier to read.
- The Title shifts up by 20px.
- A line fades in from below the heading
- A paragraph fades in from the bottom of the card

Image 3 shows a toolbar which will slide and fade in from the right, **150ms** after the hover state starts. The starter includes the toolbar itself, but you are required to add the font awesome icons to it.

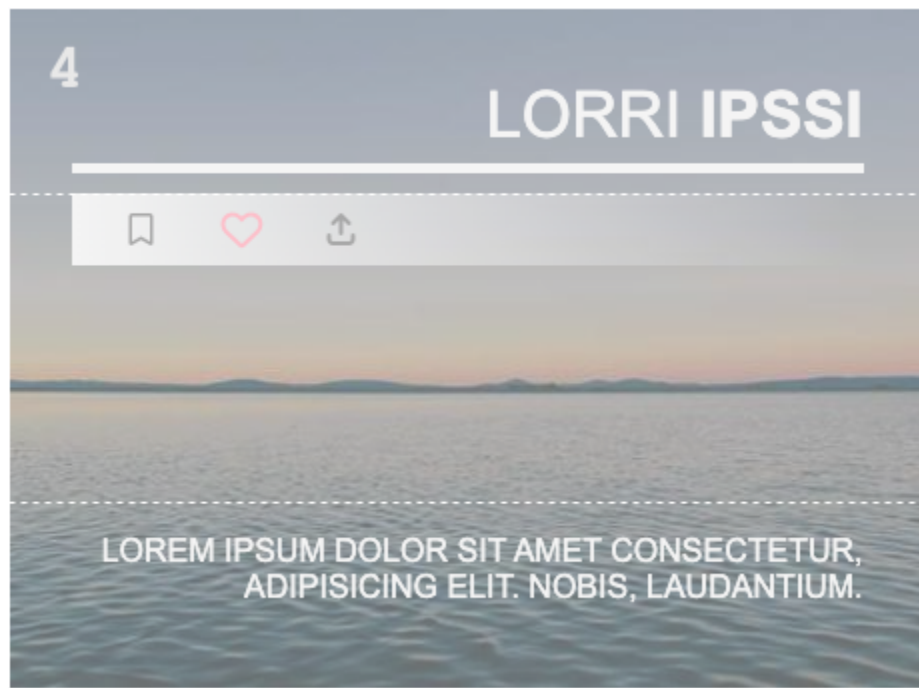

Image 4 shows one of the icons turning pink and growing by 30% when it is hovered over. Use `animate.css` to apply different animations to each icon which should begin `600ms` after the icon is hovered and should run a single `600ms` cycle.
